

What's new in Foxit Reader SDK ActiveX 3.0.1.914?

Foxit Reader SDK ActiveX 3.0.1.914 has introduced some new interfaces and enhancements which are listed below:

- **New Interfaces:**
 1. *FindFirstEx* – provides an interface for searching text in a PDF document.
 2. *SetModulePath* – sets the location path for the file of “fpdfcjk.bin”.
 3. *ShowNavPanelByString* – shows a navigation panel by its name.
 4. **GetPageTextW* – returns the Unicode text in defined pages.
 5. *GetFindString* – returns the context of the matched string.
- ***Better FDF Import/Export Support:**
- **Bug fixes:**
 1. *Fixed the issue of OnHyperLink where links cannot be triggered and EnableHyperLink(false) where links fail to be disabled.
 2. Fixed a minor issue when turning to the previous/next page after zooming to maximum or minimum.
 3. More programming languages are supported to call Foxit Reader SDK ActiveX when opening a PDF file.
 4. Fixed a problem of function “OpenCustomFile” where files cannot be saved when a user clicks to save after modification.
 5. Fixed an issue of internal memory leaks caused by some certain performances.
 6. Many bug fixes.

Note:

- The features marked with “*” apply to the professional version only.
